

BLIX

COBLATION Technology

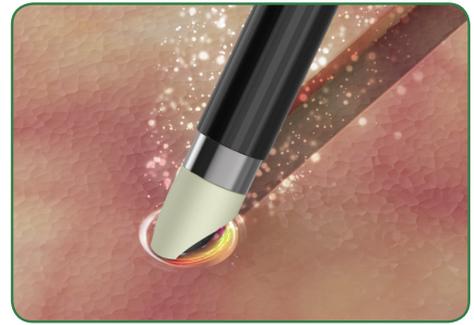

- Subacromial decompression
- ACL/PCL debridement
- Synovectomy
- Bursectomy

> COBLATION Technology

The term COBLATION means "controlled ablation."

To date, over 12 million procedure have been successfully performed utilizing COBLATION technology to ablate and coagulate tissue.

COBLATION technology combines radiofrequency energy and saline to create a plasma field. The plasma field remains at a relatively low temperature as it precisely ablates the targeted tonsil tissue.

> Key Features

- Maximize a plasma layer
- Radiopaque Tip
- Ergonomic Handle

> Model information & Spec

Type 1

Model Name	Length(A)	Length(B)	Length(C)	O.D(D)	Degree
BX-90-280-40	280	145	3200	Ø4	90
BX-90-125-40	125	145	3200	Ø4	90

Type 2

Model Name	Length(A)	Length(B)	Length(C)	O.D(D)	Degree
BX-45-280-40	280	145	3200	Ø4	45
BX-45-125-40	125	145	3200	Ø4	45
